Recoil® Bringing versatility to a range of applications

Recoil® threaded inserts, installation tooling, taps, gauges, and thread-repair kits accommodate manufacturing and aftermarket applications in the automotive, aerospace, electronics, ship building, defence, power-generation, and transportation industries. Offering a wide variety of sizes, materials, finishes, and coatings, Recoil® brand products are versatile enough to fit a broad range of applications. Manufactured in all popular thread forms, Recoil® inserts are engineered in accordance with stringent quality standards, including AS 9100, ISO 9001, TS 16949, Boeing Certification, Mil Spec, and others. Recoil® products have been proven to deliver superior performance, durability, and value.

How a Recoil® Insert Works

Recoil® inserts are rolled from high quality stainless steel wire with a diamond shaped cross section, wound to the shape of a spring thread. Once the insert is installed into a tapped hole, it provides a permanent and wear resistant thread in the parent material designed to be stronger than the original thread.

The inserts are greater in diameter than the corresponding tapped hole and compress as they are installed. This allows maximum surface contact area with the tapped thread, safely and permanently anchoring the inserts into place.

The insert's compensatory action shares the load over the entire bolt and hole, increasing holding or pull out strength. With a Recoil® insert in place, load and stress are more evenly distributed.

Typical thread problems:

- ✗ Poor flank contact between bolt & parent thread
- ✗ Unequal distribution of bolt load over engaged threads
- ✗ Failure of threaded components when loaded

Recoil® solutions:

- ✓ Greatly improved flank contact
- ✓ Equally distributed load over all tapped threads
- ✓ Reduced stress concentration for greater load bearing

Where to use Recoil® Inserts

1 Original Equipment Manufacture

Recoil® offers innovative manufacturers the opportunity to design high quality products using lighter weight metals as well as standard materials.

Recoil® inserts can be used in aluminium and magnesium alloys, carbon fibres and other materials to achieve stronger and more reliable threads than the parent material alone. Recoil® brand inserts are widely used by manufacturers in a variety of markets including the following:

- Automotive
- Electronic
- Aerospace
- Ship Building
- Defence
- Power Generation
- Transport
- Manufacturing Equipment

2 Repair

Wherever you encounter a damaged thread Recoil® provides:

- The quickest and simplest method of thread repair.
- A quality thread with superior holding power.
- The most cost-effective method of repair.
- A new thread in the original size.
- A thread generally stronger than the original.

How to install Recoil® Inserts

Instructions

1 DRILL:
Drill to clear out the damaged thread with drill size as specified on kit (if necessary).

2 CHECK:
Ensure tap thread matches bolt.

3 TAP HOLE:
Place tap into tap wrench or use the square drive in the installation tool provided*.
Tap hole to the required depth using correct procedures (if unsure contact your dealer).

4 SET TOOL:
Place insert on installation tool, positioning the adjustable top so that the insert tang is centred in the tang slot.

5 INSTALL:
Wind insert in with light downward pressure until 1/4 to 1/2 turn below the surface.

6 TANG REMOVAL:
Do not attempt to twist tang off with tool. Lift tool from tang, turn tool 90° and tap down sharply. Use tang break-off tool where supplied. For spark plug and large fine thread inserts, use long nose pliers to pull tang out.

Recoil® Products

Wire Thread Inserts

Recoil® helically wound wire thread inserts can be used to strengthen threads, giving applications a longer life. With a Recoil® insert installed, a more even distribution of load and stress can be achieved. Each insert sharing the load over the entire bolt and hole, improving holding or pull out resistance. Recoil® inserts are made of type 304 stainless steel wire rolled into a diamond shape cross-section.

Also available: Inconel, Nimonic 90, Nitronic 60, Phosphor Bronze and type 316 Stainless Steel.

Available depths: 1D, 1.5D, 2D, 2.5D, 3D

Stainless Steel

Carbon

Keyserts

Keyserts are designed to repair damaged threads or for use in original equipment, and provide easy installation and versatility. Featuring a key-locking action that prevents rotation due to vibration or torsion, commercial-grade Keyserts can be used in a wide range of materials and applications. Keyserts are available in carbon and stainless steel, and are supplied in thin wall and heavy duty styles.

Typical Applications

- Trucks, RV's
- Machinery, Small Engines
- Moulds, Tool and Die
- MRO Tasks

Note: Keyserts are not recommended for use in brittle materials, such as cast iron or plastic

Manual Installation Tool

The manual installation tool is the most practical and simple to use for general applications. This tool may be used to install 1D through to 3D length inserts. Featuring an adjustable collar to suit 1D - 3D inserts, and a square drive for tapping.

Manual Tang Break Tool

The Recoil® manual Magnetic Tang Break tool is suitable for low volume tang removal and is used for insert sizes up to M12 or 1/2". The magnet embedded in the tip allows for easy retrieval of the tang. For tang removal, simply insert the tool onto the tang, then push downward with a sharp blow.

Recoil® Thread Gauges

Recoil® gauges measure the tapped hole to ensure optimum insert performance once installed. Thread gauging is recommended wherever precision threads are required. If the finished tapped hole gauges satisfactorily, the installed insert will be within the thread tolerance.

Insert Extraction Tool

Should inserts need to be removed, the use of the Recoil® extraction tool is recommended. Extraction tools are simple and easy to use. As correct positioning will make the extraction easier, the tool should be turned 90° from the start of the coil allowing easy winding out of the insert. If the extraction tool is not gripping the insert, the edges can be resharpened.

STI tap

Pilot nose tap

Recoil® Insert Taps

Recoil® taps differ from standard taps dimensionally and only Recoil® Screw Thread Insert (STI) Taps are suitable for use with Recoil® wire thread inserts. They have a larger diameter but the same pitch as a standard tap in order to accommodate the wire insert.

Recoil® taps are available with taper, intermediate, and bottoming leads.

Also available:

- Pilot nose taps - For spark plug applications
- Machine taps - For high volume production

Recoil® Trade Series Kits

Thread Repair Kits

Everything you need for complete thread repair in one handy case. Trade Series Kits include only the best quality HSS taps which make them suitable for aluminium, magnesium, cast iron and most machinable steels.

Contents:

- HSS Drill Bit*
- HSS Intermediate STI Tap
- Thread Inserts
- Installation Tool
- Magnetic Tang Removal Tool*
- Installation instructions

*Included only on sizes M2-M12 & #2-1/2"

Spark Plug Kit

Spark Plug Kits contain special inserts for spark plug repair with metric thread forms and imperial length measurements including 3/8 and 3/4.

The Pilot Nose Taps have accurate self alignment, eliminating the need for drilling. This kit provides an inexpensive repair of spark plug ports without replacing cylinder heads and is available to repair spark plugs in diameters including M10, M12, M14 and M18.

Contents:

- HSS STI Pilot Nose Tap
 - Thread Inserts
 - Installation Tool
 - Easy to follow instructions
-

Range Kits

Recoil® Range Kits contain a selection of Recoils® most popular sizes. It provides you with an all-in-one workshop solution for multi-diameter thread repairs. It's ideal for garages and other workshops where thread repairs are often undertaken.

Contents:

- HSS Drill Bits
- HSS Intermediate STI Taps
- Thread Inserts
- Installation Tool
- Magnetic Tang Removal Tool
- Installation instructions
